Abstract (en)

[origin: WO2018184775A1] The aim of the invention is to provide an electrical appliance (21) for connecting to a high voltage, comprising an active part (22) comprising a magnetisable core (23) and at least one winding (25, 26) designed to produce a magnetic flow in the core (23), and a boiler (10) that can be filled with an insulating fluid and in which the active part (22) is arranged, said electrical appliance being compact and lightweight. To this end, the boiler (10) has an inner wall of a shape that is complementary to the outer contour of the winding or the windings (25, 26).
