Abstract (en)

The present invention relates to height adjustment means for adjusting the height of an article with respect to a supporting surface. The height adjustment means comprising a plate-like member having at least one fixation point for mounting the plate-like member substantially vertically at the article, the plate-like member comprising an outer rim a portion of which, in use of the plate-like member, rests on the supporting surface, wherein the plate-like member is configured to be mounted at the article in a plurality of orientations and/or positions that provide for a different distance between the fixation point and that portion of the rim which rests on the supporting surface.
