Abstract (en)

[origin: EP3578694A1] Disclosed in the present invention is an electroplating device for a small component. The electroplating device for a small component comprises one or more electroplating units (102). Each electroplating unit (102) is provided with an electroplating roller (2), an electroplating tank (3), a driver (4), and a movable frame (5). The driver is disposed in the electroplating tank (4), and is used for the electroplating roller (2) to intermittently rotate. The movable frame (5) is disposed on one top of the electroplating tank (3). The electroplating roller (2) can be taken away from the electroplating tank (3) by moving the movable frame (5), and is placed into another electroplating tank (5), and the number of the electroplating tanks (5) can be expanded to be greater than one, so as to achieve the objective of continuous production.
