Abstract (en)
[origin: EP3578747A1] In the roof window, the ventilation device (6) is accommodated in the sash top unit (7) forming part of or constituting the sash top member (21). The ventilation device (6) is releasably connected to the sash top unit (7) by non-positive engagement means (65). The ventilation device (6) comprises a border section (61), a cover section (62) with activating means in the form of push buttons (63), and a back section (64) accommodated in the track (75) in the top sash unit (7) associated with the engagement means (65). The engagement means (65) preferably comprises a spring lever (65) interacting with the top sash unit (7).
