Abstract (en)

[origin: EP3579088A1] There is provided a position indicator which, when handwriting visibly formed by a core body is visually erased, can simultaneously erase corresponding electronic data. A pen-shaped casing includes a first indicating portion and a second indicating portion in respective end portions thereof. The first indicating portion includes a core body capable of visually forming handwriting corresponding to a writing operation of a position indicator and a first circuit element disposed such that a position indicated on a sensor surface can be detected by a sensor. The second indicating portion includes an erasing member projecting from the casing, for visually erasing handwriting formed by the core body and a second circuit element disposed such that a position indicated on the sensor surface can be detected by the sensor. The second indicating portion includes a holder that holds the erasing member with respect to the casing, and the holder includes a member that contributes to an interaction with the sensor.
