Abstract (en)  
The present invention provides a receptor connector which comprises a housing (11) and a pin assembly including a plurality of terminal pins (12) each of which is partially provided inside the housing (11) and partially extended to the outside of the housing (11). The receptor connector further includes at least two positioning fixation posts (13) which are provided on the housing (11) and spaced apart from each other, the positioning fixation posts (13) comprise a connecting portion with one end connected to the housing (11), a positioning portion, and a fixing portion, the positioning portion and the fixing portion are connected to the other end of the connecting portion and are provided with a gap therebetween, a groove is formed between the positioning portion and fixing portion, and a locking protrusion is provided on the fixing portion at a side corresponding to the groove.
