Abstract (en)

[origin: WO2018146600A1] The present invention relates to an elasticized boot in natural leather obtained by means of an improved process. The process starts from a single piece of suitably shaped elastic natural leather and provides boots in a wide range of shapes characterized by features not found in the state of the art. These remarkable features consist in a boot having a "one-piece" appearance, with a minimum number of substantially invisible seams, in a boot easy to wear and easy to take-off, in a boot close-fitting to the foot and to the leg yet having optimal breathability.
