Abstract (en)

[origin: WO2018146109A1] The present invention relates to a method to determine the volume of the breast using materials readily available in every household and allowing women to determine their breast volume and corresponding bra size. The method is based on the determination of the breast volume by direct measurement of the circumference of the chest or torso immediately below the breast, sometimes referred to as chest circumference, diaphragm size or body size, etc.; and by direct determination of the breast height using a backing sheet.
