Abstract (en)

[origin: WO2018146395A1] The invention concerns a housing (3) intended to be arranged on a vehicle, in particular a military vehicle, and having a substantially parallelepiped shape comprising a front wall and a rear wall that each comprise at least one bore for allowing air to flow inside the housing. This housing is characterised in that at least one of the front or rear walls carries a plate (11), arranged outside of the housing (3) and at a distance from said wall (5), the housing (3) further comprising at least one first slot (14) allowing air to pass between the plate (11) and the wall (5) in question, and at least one second slot (15) constituted by the gap between a lateral edge (11b) of the plate (11) and said wall (5). The invention also concerns a weapon system comprising at least one missile launcher arranged in such a housing.
