Abstract (en)

[origin: WO2018145835A1] The invention relates to a method for setting at least one route for a railway installation that has at least one signal box device (S1, S2) and a multiplicity of track-side control elements (2) connected to the signal box device. The method involves the signal box device (S1, S2) ascertaining at least one control element (2) required for the route from the multiplicity of control elements and ascertaining at least one functional job to be performed by the ascertained control element to set the route and informing the control element about the ascertained job, and involves the control element ascertaining at least one control measure to be performed by the control element to perform the job.
