Abstract (en)

[origin: WO2018145138A1] The invention specifies a method for operating a storage-and-retrieval unit (3), in the case of which a rail line (1)/power-supply rail (6) is set to a hazard-operation voltage when a risk posed by the storage-and-retrieval unit (3) is established. In the storage-and-retrieval unit (3), the level of the voltage applied to the rail line (1)/power-supply rail (6) is measured and a current path between the rail line (1)/power-supply rail (6) and a drive motor (5, 5a..5c) of the storage-and-retrieval unit (3) is disconnected when the voltage measured falls below a threshold value associated with a hazardous situation or emergency. Also specified are a storage-and-retrieval unit (3) and an automated rack storage system for implementing the method proposed.
