Abstract (en)
[origin: WO2018146186A1] The invention relates to a mounting frame (100) which can be attached to a ceiling (3) and comprises an assembly of basic profiles (10) comprising a housing (14) for receiving an edge of a covering (1) and a plurality of V-shaped or U-shaped locking clips (50) designed to enter the receiving housing (14) and remain therein in a locked position in which the edge of said covering (1) is clamped between the locking clip (50) and said housing (14). Each locking clip (50) is therefore interposed between an insertion tool such as a palette knife and the covering (1) and facilitates the insertion of the covering (1) into the receiving housing (14) without damaging it. The covering (1), the dimensions of which remain greater than those of said frame, can thus be completely removed and reused since it has not been damaged in any way, either while it is being fitted or while it is being held in place.
