Abstract (en)  
[origin: CA3061080A1] The invention relates to a decoupling track (1) having a carrier plate (2) and a plurality of nubs (4) protruding out of the carrier plate plane (3). According to the invention, a plurality of protrusions (21a) and/or recesses (21b) is provided on the side of the nub base (10) of at least one nub (4) facing the nub interior space (20), and/or a plurality of protrusions (21c) and/or recesses (21d) is provided on the side of the carrier plate (2) facing the nub interior space (20), in particular wherein the protrusion (21a) and/or the recess (21b) on the nub base (10) and/or the protrusion (21c) and/or the recess (21d) on the carrier plate (2) have a height and/or a depth of greater than 1 µm, preferably greater than 100 µm, further preferably between 100 to 1000 µm and in particular at least substantially between 300 to 500 µm.
