Abstract (en)

[origin: WO2018146196A1] The invention relates to an air-cooled dry-type transformer (1) comprising a core (10) provided with a branch (11); a winding body (14) arranged about the branch (11); a cooling channel (25) extending in the direction of the longitudinal axis of the winding body (14), the cooling channel being arranged between an inner part (15) of the winding body (14) and an outer part (20) of the winding body (14), the cooling channel (25) having on both ends openings (40, 42) and an essentially annular shaped cross-section having a round, oval or polygonal basic shape; at least one ring ventilator (30, 30a, 30b, 30c) comprising a ring (32) and a blower (34), wherein the blower (34) is designed to suction air and to blow the air from the ring (32) along a longitudinal axis of the ring (32), wherein an air flow (31) is generated. The ring ventilator (30, 30a, 30b, 30c) is dimensioned and mounted such that the air flow (31) generates a cool air flow (35) in the cooling channel (25). The invention further relates to a power device with air cooling and a cooling method using a ring ventilator.
