Abstract (en)

[origin: WO2018150158A1] A lighting apparatus comprising a plurality of lighting units. Each lighting unit comprises: a light source, a paired IR transmitter and IR receiver. The IR transmitter is configured to emit an IR signal and the IR receiver is configured to receive the IR signal reflected from a surface. The IR signal is different for each of the plurality of lighting units. The apparatus also comprising a processor, the processor being configured for each of the plurality of lighting units to output one or more control signals to control the light source in response to the IR receiver receiving the reflected IR signal.
