Abstract (en)
[origin: EP3581753A1] A screening device comprising an upper guide (2), a lower guide (3), and a screening assembly (4) comprising an upright (5), a movable bar (6) parallel to the upright (5) and a screening sheet (7). At least a first and a second slider (9) each carried by one of the opposite ends of the movable bar (6) are slidably engaged respectively along the upper guide (2) and the lower guide (3), to guide the movement of the movable bar (6) moving away and approaching the upright (5). Stabilizing devices (40), configured to maintain the movable bar (6) according to an orientation parallel to the upright, comprise at least one toothed pinion (41, 45) rotatably engaged with each of said sliders (8), each cooperating with a rack toothing (42, 46) extending in the upper guide (2) and in the lower guide (3), parallel to the direction of movement of the movable bar (6).
