Abstract (en)

[origin: EP3581849A1] This invention provides a cooling device (1) for cooling a light source located in an automotive lighting device. This cooling device (1) comprises a heat sink (2) intended to be in thermal contact with the light source and a plurality of fins (3) in direct thermal contact with the heat sink (2). Some of the fins (3) comprise a base in direct contact with the heat sink, the base comprising a first (31) and second (32) sides parallel to a first direction (d1) and a third (33) and fourth (34) sides shorter than the first (33) and second (32) sides, the third side (33) forming an angle between 25° and 75° with respect to the first direction (d1).
