Abstract (en)

[origin: WO2018152264A1] A helmet apparatus for delivering temperature conditioned air including passively or actively cooled, heated, or ventilated air to the interior of a helmet is disclosed. A device housing which enshrouds a device for providing temperature conditioned air is placed on a rear portion of a helmet shell. The device housing has air inlets and air rejector vents for delivering fresh air to and removing heated air from the device, and is configured to reduce the heated air from re-entering the device through the air inlets. The helmet apparatus is designed to withstand impact forces without injuring the wearer.
