Abstract (en)

[origin: WO2018150107A1] Device for controlling the movements of a horizontal sleeping platform (2), stowable at the ceiling, via the opening of its feet or legs (3). The aim of the invention is to deliberately force the legs (3) to open and to ensure that the platform (2) is fully supported in the sleeping position. The invention relates to a device providing for the vertical movements of a platform (2) and controlled by the opening of its legs (3). The device ensures that the legs (3) are open when the platform (2) is in the sleeping position. The device according to the invention is particularly intended for beds (1) having a sleeping platform (2) which can be stowed at the ceiling.
