Abstract (en)

[origin: WO2018150143A1] The invention concerns a device (1) for treating the surface of at least one object (120) with a specific solution, comprising a treatment chamber (100) configured to receive one or more objects (120) to be treated, spraying means (200) for spraying an aerosol in the treatment chamber (100) and means (300) for holding at least one object (120) in said chamber. The invention is characterised in that the spraying means (200) comprise a first ramp (204A, 205A) of nozzles, arranged on a lateral wall (102) of the treatment chamber (100) in such a way as to be aligned along the third axis (AA') of rotation, and in that the first ramp (204A, 205A) of nozzles comprises at least one nozzle (202) configured to spray a specific solution in the form of a hollow-cone jet.
