Abstract (en)  
[origin: WO2018149603A1] The invention relates to a device (1, 1') for the flexible distribution of packages (3), comprising: at least one conveyor belt (2) for transporting the packages (3) in a transport direction (T), and at least one distribution device (4) for moving the packages (3) in relation to the conveyor belt (2), the distribution device (4) comprising a plurality of sliding elements (5) that are mounted on the distribution device (4) in a movable manner and can be driven independently of each other. The aim of the invention is to obtain a reliable movement of individual packages of different sizes at individual speeds. To this end, the sliding elements (5) each have two contact surfaces (6A, 6B) arranged at an angle to each other.
