Abstract (en)
[origin: WO2018149554A1] The invention relates to a holding device (1) for holding a revolving platform (53) of a lift facility (50), said lift facility (50) comprising: at least one lift cage (51) that can travel on guiding rails (56, 57, 58) in a shaft (52); at least one stationary first guiding rail (56) secured in a shaft (52) and oriented in a first, particularly vertical direction (z); at least one stationary second guiding rail (57) oriented in a fixed manner, in a second, particularly horizontal direction (y); and at least one third guiding rail (58) that can be rotated in relation to the shaft (52), said third guiding rail being secured to the revolving platform (53) and being switchable between an orientation in the first direction (z) and an orientation in the second direction (y), the holding device (1) comprising: at least one shaft fixing element (3) for fixing the holding device (1) in the shaft (52); a holding frame (2) for fixing the revolving platform (53) at least indirectly on the holding device (1); and a first adjusting arrangement (5) for adjusting the orientation of the holding frame (2) in relation to the shaft fixing element (3).
