Abstract (en)

[origin: WO2018149722A1] The invention relates to a drying hood for drying a fibrous material web, such as a tissue paper web, comprising a plurality of nozzle boxes for supplying or discharging air, a housing that at least partially surrounds the nozzle boxes, wherein the nozzle boxes are each individually mounted on the housing via a first and a second bearing, wherein the two bearings are configured in such a way that they permit at least one movement of the nozzle box relative to the housing along a longitudinal axis of the nozzle box and/or at least one movement in a transverse direction to same, along a transverse axis of the nozzle box, and the two bearings differ by one in terms of their translational degree of freedom.
