Abstract (en)

[origin: WO2018150082A1] A method for covering a wall structure, such as for facade cladding or the like, wherein upon a wall structure are installed several wall panels (1) with a thin wall structure to be mounted in an adjacent and/or superimposed relationship with each other in connection with the wall structure in a plane defined thereby. The wall panel (1) used in the method is mounted in connection with a wall structure by employing a spacer member (2), which is to be fastened thereto and to which the wall panel is coupled in place by moving the wall panel by means of a coupling system (3) present between itself and the spacer member, whereby the wall panels are locked securely in place with a form locking arrangement present at top and bottom edges (UY, UA) thereof. The invention relates also to a system functioning according to the method.
