Abstract (en)
[origin: WO2018149969A1] A wave installation for generating an artificial wave (14), having a supply basin (16) and a wave basin (11) and having at least one delivery means, in particular at least one pump (15), for delivering liquid from the supply basin (16) to the wave basin (11). The wave basin (11) is designed for a liquid to flow through it from an inlet (20) to an outlet (21) so as to form a static wave (14), with at least one wave excitation element arranged in the wave basin (11). The wave installation is characterized in that an intermediate basin (17) is provided, which has an outlet that is fluidically connected to the inlet of the wave basin (11).
