Abstract (en)
[origin: WO2018149903A1] The invention relates to an exhaust gas cooler (6) for an internal combustion engine (2), wherein at least two flow paths (11, 12) are formed by the exhaust gas cooler (6), and wherein the exhaust gas cooler (6) at least comprises: at least two cooling stages (7, 8), which are arranged one after the other along a first of the flow paths (11), and at least one bypass line (9) for bypassing at least one of the at least two cooling stages (7, 8), wherein a second of the flow paths (12) extends at least partially through the bypass line (9).
