Abstract (en)
Window sill assembly comprising a frame and a window sill, wherein the assembly is provided so as to extend over an outside wall and at least a part of a cavity wall, wherein the frame comprises at least a rear segment and two side segments which are provided to support the window sill respectively at the position of its rear side and at the position of its sides, wherein the frame further comprises a front profile which is provided so as to extend at least partially over the outside wall for the purpose of supporting a front side of the window sill, wherein the window sill is provided at the position of the front side with a drip zone, all this such that water can be discharged via the drip zone from a position on the front profile, wherein the window sill assembly further comprises a sheet material which extends under the window sill, wherein the sheet material is connected on the rear side and the sides of the frame and extends to a position at the front profile.
