Abstract (en)

[origin: WO2018154436A1] This is a coupling element, for example an eyelet (10) for laces, a button, a buckle, or other similar element, in which a through-hole is formed and is adapted to be traversed by a pin (14) of a rivet (12) in a plastic material. The through-hole of the coupling element is shaped in such a way that the counterhead (32) obtained by riveting the tip of the pin (14) is optimally attached to the coupling element itself.
