Abstract (en)

[origin: WO2018153698A1] The invention relates to a dishwasher (1), in particular a domestic dishwasher, having a control device (15) for executing a number of washing programs (P1, P2, P3) for washing items to be washed, and an input means (16) for sensing a user input (W) for shortening a running selected washing program (PA), wherein the control device (15) is designed to adapt the running selected washing program (PA) depending on the sensed user input (W) such that a remaining washing duration (RTa) of the adapted selected washing program (PA') is shortened in comparison with a normal remaining washing duration (RTn) of the running selected washing program (PA).
