Abstract (en)

[origin: WO2018153997A1] The invention relates to a guide system (1) for a detection device (3) for monitoring a substance (23) coming out of a nozzle orifice (5) of a metering device (2), wherein a nozzle orifice region (6) for arrangement on the nozzle orifice (5) is associated with the guide system (1), and the guide system (1) comprises at least one material body (15, 16) in which at least two guide ducts (7) are formed, which are designed to guide signal conductors (8) to the nozzle orifice (6), wherein the end regions (14) of two guide ducts (7) facing the nozzle orifice region (6) are arranged, with regard to their central axes (9), substantially on a common straight line (G) relative to one another and are arranged, with regard to the nozzle orifice region (6), opposite one another. The invention further relates to a detection device (3) and to a metering device (2) having such a guide system (1) and to a method for configuring a detection device (3) having such a guide system (1).
