Abstract (en)

[origin: WO2018154200A1] The invention concerns a device (1) for installing an injection piston (2) in or removing same from a moulding machine (3). The device (1) comprises a lift table (4) supporting an attachment system (5) for attaching one end (2a) of the injection piston (2). The attachment system (5) is mounted on a carriage (6) that is movable in translation on the lift table (4) in two opposing directions. The movable carriage (6) has drive means cooperating with complementary drive means carried by the lift table (4), the drive means of the movable carriage (6) being operated by means of an operator acting on actuation means (9) for actuating said drive means. The invention is useful in the field of moulding machines with injection pistons.
