Abstract (en)

[origin: WO2018153937A1] A method for operating a plate-machining system (10) comprises the following steps: a. performing a machining process by means of the tool driven by the tool drive; b. determining or sensing a value of a variable which characterises a quality feature resulting from the machining process on the workpiece (14); c. determining or sensing a value of a variable which characterises the machining process and/or the value of a variable which characterises a property of the tool and/or the value of a variable which characterises a property of the workpiece (14); d. creating and storing a data set in a memory (52) which links the sensed value of the quality feature with the value of the variable which characterises the machining process and/or the value of the variable which characterises a property of the tool and/or the value of the variable which characterises a property of the workpiece.
