Abstract (en)  
[origin: CA3054240A1] The invention relates firstly to a room (1) in a building having at least one pressure lock (12, 13) for the exchange of materials and persons between the building and the room (1), having a ventilation apparatus for supplying supply air from the building into the room (1) at the top and an extraction apparatus for extracting exhaust air from the room (1) into the building at the bottom in such a manner that the room (1) has an overpressure by comparison with the building, wherein the room (1) has a floor (5) and an enclosure (6) enclosing the room (1) above the floor (5) in a pressure tight manner and the building has an outer enclosure which protects the room (1) against the weather conditions outside the building. The invention further relates to a method for producing a room (1) of this type. According to the invention, in order to simplify the production of a clean room, the enclosure (6) is at least predominantly flexible and the overpressure holds the enclosure (6) in the shape of the room (1).
