Abstract (en)
[origin: WO2018153536A1] The invention relates to a lock arrangement (3) comprising a lock housing (4), a rotary latch (6; 6') rotatably mounted on the lock housing (4) and a detent (7; 7') that is pivotably mounted on the lock housing (4) and can be moved between a locking position securing the rotary latch (6; 6') and a release position releasing the rotary latch (6; 6'), the detent (7; 7') being designed such that, in the locking position, it blocks a rotational movement of the rotary latch (6; 6') towards the open position (18). The invention is characterised in that the detent (7; 7') is designed such that, in the locking position, it blocks a rotational movement of the rotary latch (6; 6') away from (23) the open position.
