Abstract (en)
[origin: WO2018189176A1] The invention relates to a power plant (1) comprising a steam turbine (2) with a shaft (3), further comprising a condenser (4) mounted downstream of the steam turbine (2) in the direction of flow of the steam, a vacuum pump (5) mounted downstream of the condenser (4), a compressed steam system (6) with shaft seals (7), and a compressed steam supply line (8) extending into the shaft seals (7); a first nitrogen line (9) extends into the condenser (4), and a second nitrogen line (10) as well as a recirculation line (11) that branches off the vacuum pump (5) extend into the compressed steam supply line (8). The invention especially relates to a method for preserving a power plant (1).
