Abstract (en)

[origin: WO2018153783A1] The invention relates to an electric machine comprising a rotor (1) and a stator (2) which has a wall (3) facing the rotor, the stator having a plurality of radial slots that are arranged circumferentially along the stator. The slots have openings (6) which extend into the inner wall and which are closed by sealing means (7, 8) in such a way as to form a plurality of closed slots (5).
