Abstract (en)

[origin: US2019389607A1] A packaging machine for packaging products to be packaged by means of a stretchable film includes: a film transport device for a film feed to a product to be packaged; a first and a second belt conveyor for transporting the film, the belt conveyors each including a first and a second belt conveyor that are synchronously driven in a film transport direction prescribed by the film transport device and are arranged side by side, at least the second belt conveyor device being movable in a direction perpendicular to a film transport direction; and a movable film guiding element, by which the film is introducible into the film transport device, the film guiding element including a guide plate for guiding the film that has a first recess and a second recess in an upper edge in a vertical direction toward the belt conveyors.
