Abstract (en)

[origin: CN110644209A] The invention relates to a floor assembly (1) for a device for drying laundry, comprising a partition (6) and heat exchangers (4, 5) that can be placed at least indirectly on the partition (6) of a heat pump (3) thermally coupled to a process air system of the device. The heat exchangers (4, 5) have different structure heights. In order to reduce the manufacturing cost of the device for drying laundry and to simplify the production of such device, the floor assembly (1) has at least one adapter component (7) manufactured separately from the partition (6), the structure height of the adapter component corresponds to a difference in the structure heights of the heat exchangers (4, 5) and the adapter component is supported between the partition (6) and the heat exchanger (4) with the lower structure height.
