Abstract (en)  
[origin: EP3587686A1] A grating (1) with mesh structure is described, where there is a pattern of openings (3) at the top side of the grating, which allows water to drain from the top side. The grating is made from sheet metal. The openings (3) at the top side of the grating are formed by pressing of sheet metal so that walls are formed between the openings, which have the shape of barrel arches, where the top of the arches forms the top of the grating and where the sides of the arches form side walls (5) in adjacent openings.
