Abstract (en)
A system installable in a space (E) at a ceiling (C), comprising at least one longitudinal profile or beam (10) couplable with the ceiling (C), at least one longitudinal conductive guide rail (41') fixable to the profile or beam (10) and that can be power-supplied with electric power supply means and at least one lighting device (40) removably coupled with the longitudinal beam or profile (10) and electrically connected with the longitudinal conductive guide rail (41'). The profile or beam (10) comprises a pair of lateral walls (11,12) mutually facing each other and an upper wall (13) designated to be faced towards the ceiling (C) mutually cooperating to internally define a compartment (14) open at the bottom to removably receive the lighting device (40); The system further comprises first means (60) for the magnetic coupling of the lighting device (40) and the longitudinal conductive guide rail (41') and second means (70) for the removable mechanical coupling of the lighting device (40) and of the profile or beam (10), said second coupling means (70) cooperating with the first magnetic coupling means (60).
