Abstract (en)

DEVICE FOR COVERING WINDOW OPENINGS ON A TEMPORARY BASIS, comprising, at least, a telescopic rod (2) with fastening points to which up to four plates (3) are secured, inserted in horizontal grooves (5), allowing for the adjustment of the height of the set of plates (3) by extending the rod (2), and adjusting the width of the set of plates (3) by moving the plates (3) to one side or the other. The device features two upper plates (31) and two lower plates (32) and the rod (2) has three fastening points (4), one upper (41), one central (42) and one lower (42), and is composed of two sections of tubing, upper (21) and lower (22), in addition to a locking mechanism (7) and a rack (8) for fixing the relative position the system.
