Abstract (en)

[origin: WO2018087177A1] The invention relates to a method for controlling access to data sets (106, 108, 10, 112, 114, 116). The method has the steps of linking a first owner certificate (128, 130) which is assigned to a user data database (102) to a first user (U1) and providing a first and a second interface. The first user (U1) can generate a second owner certificate for the user data database (102) via the first interface and link said certificate to a second user (U2) in order to allow the second user to create data sets in the user data database (102). The second user which has generated a data set (106, 108) in the user data database (102) can generate an access certificate (acc. cert U2[W], acc. cert U2[R], acc. cert U2[S]) via the second interface (144) and link same to the user certificate of a user which is to be allowed access to the data set. The user data database only allows the first user to access a data set created by the second user if the first user is assigned both an owner certificate for the user data database as well as an access certificate for accessing the data set.
