Abstract (en)

[origin: EP3588643A1] To prevent impairment of the performance of a unit cell, which would otherwise occur due to poisoning caused by a contaminant such as Si. An electrochemical reaction unit includes a unit cell including an electrolyte layer, and a cathode and an anode that face each other in a first direction with the electrolyte layer intervening therebetween; and a felt member containing a ceramic material or a metal and a silica component. The felt member includes both a first crystal structure and a second crystal structure, which is an SiO₂ crystal structure.
