Abstract (en)
[origin: WO2018158548A1] The invention relates to a container (2) comprising a base (6) provided with an opening and a closing member (8), magnetic coupling means being arranged for keeping the closing member in the position for closing the opening by magnetic attraction. At least one portion of the base (6) consists of a non-magnetic material loaded with ferromagnetic particles and the closing member (8) comprises at least one magnetised lower face (8a) coming into contact with the base. In one embodiment, the non-magnetic material is a plastic material or glass.
