Abstract (en)

[origin: WO2018197817A1] The invention relates to a ventilation device for generating an air flow in the direction of a motor vehicle heat exchanger, comprising: pipes; at least one air manifold comprising apertures, each pipe opening, at one of its ends, into a separate aperture of the air manifold, the pipes being provided with at least one opening separate from their ends and located outside the air manifold; at least one air propulsion device arranged in said at least one air manifold.
