Abstract (en)

[origin: WO2018197819A1] The invention relates to a ventilation device (2) for generating an air flow in the direction of a heat exchanger (1) of a motor vehicle, comprising pipes (8) through which an air flow is intended to pass, the pipes (8) being provided with at least one opening (40) for the passage of the air flow, separate from the ends thereof. The pipes (8) are aligned in a direction perpendicular to a direction of extension of the pipes (8), with a pitch of at least 15 mm and at most 30 mm.
