Abstract (en)

[origin: WO2018158325A1] The present invention relates to a lamp having a light head (1) with a light source arranged therein, and a retaining element (2), wherein the light head (1) is arranged so as to be rotatably mounted on the retaining element (1) about a rotation axis (D), wherein the light head (1) has a joint pin (3) and the retaining element (2) has two receiving jaws (4 and 5), which are arranged encompassing the joint pin (3), such that the joint pin (3) is rotatably arranged about the rotation axis (D) opposite the receiving jaws (4 and 5), wherein the lamp furthermore has a spring element (6), which is arranged such that it presses the two receiving jaws (4 and 5) together to inhibit the rotational mobility of the joint pin (3).
