Abstract (en)

[origin: WO2018158661A1] The invention relates to a device for determining at least one physical parameter of pharmaceutical products such as, for example, tablets (T), pills, oblongs or similar, the device having at least one examining station (1). The device has, in addition, at least one automatic system for transporting the products to and/or between and/or inside and/or from the or each examining station (1). The transport system has at least one robotic arm (2) having at least one controllable holding mechanism (3) for the pharmaceutical products. The travel paths and the spatial orientation of the holding mechanism (3) can be freely programmed.
