Abstract (en)
[origin: WO2018158515A1] Accessory comprising a first face and a second face (8) connected by a side face (9), the second face comprising a groove (5) extending as far as the side face and forming, on this side face, a hole (10), the shape of which is defined by the cross-section of the groove, the cross-section having an open contour comprising a base and an opening connected by a first lateral side and a second lateral side, the first lateral side and second lateral side each comprising a portion drawing nearer, from the base to the opening, to the opposite lateral side, the size of the base of the contour being constant in a direction defined by a direction extending substantially perpendicularly to the cross-section and running from the hole to an internal portion of the accessory, this groove being intended for receiving an attachment element (3).
