Abstract (en)

[origin: WO2018158054A1] The invention relates to a cable bridge module (100, 200) for electrically bridging two electrical connection terminals (20), each of which has a bus bar and a bridge shaft (23), by means of which the bus bar can be electrically contacted, the cable bridge module comprising: an electrically insulating housing (110, 210); a conductor receptacle (121, 211) for receiving an electrical conductor (10); an electrical contact (130, 230) having a first contact region (131, 231) protruding out of the housing (110, 210) for electrically contacting a bus bar of a connection terminal (20) and having a second contact region (132, 232) arranged in the housing (110, 210) for electrically contacting the electrical conductor (10); and an actuating element (120, 220), which can be moved relative to the housing (110, 210) between a receiving position, in which the electrical conductor (10) can be inserted into the conductor receptacle (121, 211), and a contact position, in which the electrical conductor (10) is galvanically connected to the second contact region (132, 232).
